

3 Simple and Easy Fall Clean-Up Chores for a Dry, Healthy Basement this Winter

Remove debris from gutters ~ remove leaf and other debris from the gutters. Clearing the channel will ensure the proper flow of water through your gutters. This will help rainwater and snow-melt to properly drain away from the foundation.

Clear debris from window wells ~ window wells collect all kinds of debris that you may never have thought about. If your window wells are clean and free from debris, the air flow will be better and also, moisture will also be limited.

Remove leaves (and other debris) from around the foundation ~ leaves collect moisture and restrict water flow. Rain and melting snow will not flow away from the home's foundation if leaves and other debris are piled up.

Happy Fall!
